#### Rainbow and Kyberpass Team Up

Posted on 28.6.2001

Rainbow and Kyberpass Team to Expand European e-Security Marketplace: Kyberpass and Rainbow Enhance their e-Security Solutions by Offering Shared Technology and Marketing Activities

CHERTSEY, Ottawa--(BUSINESS WIRE)--April 24, 2001--Kyberpass Rainbow Technologies (NASDAQ:RNBO) a leading provider of high-performance security solutions for the Internet and e-commerce, and Kyberpass Corporation, a leading provider of e-security software for trusted e-business, today announced a strategic teaming agreement designed to increase one another's presence in the European e-security marketplace.

The partnership allows both companies to combine unique and complementary qualifications that elevate the level of their professional services to a more competitive solution. The teaming agreement applies to the European e-security marketplace with Kyberpass supplying e-security software products and Rainbow supplying smart card and hardware cryptographic modules. In addition, the agreement outlines provisions for joint-sales initiatives, strengthening each company's marketing position.

"I am excited about the potential of our partnership with Rainbow Technologies. The synergies between our two organizations exist on many levels and this agreement provides a strong framework to exploit those synergies to our mutual advantage," said David Lynch, European managing director of Kyberpass Corporation.

The potential behind the combined resources will be demonstrated at Infosecurity Europe 2001 trade show, April 24-26, 2001 in London. Together, Kyberpass and Rainbow will demonstrate PKI-enabling of Rainbow's iKey USB-based cryptographic token using Kyberpass PKI-enabling security middleware.

"Our partnership with Kyberpass is very exciting. It brings together ease of access and administration with strong authentication, which are the essential elements of successful security for e-business," said Graham Peat, European marketing manager for Rainbow Technologies. "We are very pleased to be working with Kyberpass to accelerate the adoption of our iKey2000 products for PKI solutions throughout Europe." About Rainbow Technologies

Founded in 1984, Rainbow Technologies is a leading provider of security solutions for the Internet and e-Commerce. Rainbow applies its core technology to a variety of Internet applications from securing software, to the acceleration of secure communication for e-Commerce and Virtual Private Networks (VPNs). Rainbow's products include secure Web server and VPN acceleration boards; anti-piracy and Internet software distribution solutions; PKI-based security solutions; voice, data and satellite security systems; smart cards and USB-based authentication tokens. The company is headquartered in Irvine, California, and maintains offices throughout the United States, United Kingdom, France, Germany, Australia, China, India, The Netherlands, Brazil and Taiwan. A network of nearly 80 authorized distributors sells Rainbow products worldwide. #### PRESS RELEASE

McAfee.com announced that it has received a serious number of reports from both South America and Europe of a virus that's been infecting users over the last 48 hours. This virus, named "W32/Magistr.b@mm" is a variant of "Magistr.a" and has been rated "medium risk" for corporate and home users. [more]

#### FEATURED ARTICLE

Many people seem to be clueless about PC Security. Some apparently do not even care. But facts are simple in this regard. The method of intrusion matters little. What matters most is the price tag subsequent to the intrusion. [more]
