Kyberpass application chosen for banking project

By *InBusiness Media Network staff*

Unisys Corp., a U.S. provider of electronic-commerce products and services, has chosen Ottawa-based Kyberpass Corp. to help protect transactions for an online-banking project it is working on.

Based in the Philadelphia area, Unisys is working with Microsoft Corp., Baltimore Technologies and Identrus to create architecture that will secure an online environment for high-value transactions on a Windows 2000 server.

Kyberpass' e-Transaction Trust Platform will be used for this initiative, called the Trusted Community Solution. Unisys said the use of Kyberpass technology will mean the project will be available for use by a financial institution in less than two months.

"We are extremely pleased to be working with Unisys to deliver these products to financial institutions around the world," Kyberpass CEO Ron Walker said in a statement.
